Tough 12mm ECO350 High Tensile Teeth

ECO350 12mm Teeth are the match for light to medium timber and scrub work. The high tensile grade means no bent teeth and the perfect attachment for everyday cleanup tasks.

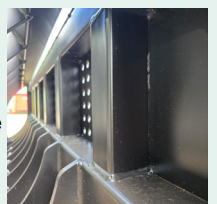

Massive Jaw Opening

With the massive jaw opening of 1.4m and tine length of 700mm, there won't be much that you can't handle.

Heavy Duty Ladder Frame Construction

Tough frame means built for tough work. Simple engineering to give you a lifetime of confidence in your attachment.

Proprietary HD Pin System

We do it different. No bolts coming loose. No heads shearing off or being worn down by abrasion. We knew this was a problem, so we developed our own pin system.

Heavy Duty Integrated Hitch

No off the shelf hitch pickups used here. We designed our own. Perfectly integrated and reinforced - you can have confidence in your attachment.

Locally made hydraulic cylinders

Locally Made and supported Hydraulic Cylinders. Made tough for harsh operating conditions and easily serviceable with parts available from local suppliers.

HD Reinforced Greaseable Pivots

Never fear breaking a pivot or wearing a pin with the MULTIGRAB HD reinforced pivots. Fully fabricated construction ensures a life of reliability.

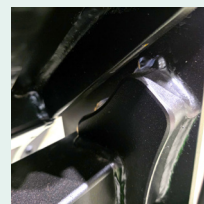

Oversize Full width hydraulic hose protection

A broken hose or a damaged loader pickup is wasted time and money. The job needs doing without these problems. Fabricated from heavy gauge steel plate, this protection will never fail an operator.

Motion Stops On Claw

Whether it is up, or whether it is down. Heavy plate stops to protect the cylinders from excessive forces. We know operators.

100% Australian Made and Fabricated

100% Manufactured by Sturgeon Equipment in our Hamilton Facility to the highest quality standards. Only Aussie Made!
